c4_support.py

`src/moe_pruning/data/c4_support.py · 169 lines · module moe_pruning.data.c4_support`

What it does

Filtering logic for building a customer-support evaluation subset from the C4 web crawl, plus the loader for the resulting evaluation file.

How it works

- `SupportDocumentFilter` matches the configured support phrases case-insensitively on word boundaries (so `FAQs` does not count as `FAQ`, and generic words such as `help` never count alone) and URL keywords as whole URL tokens.
- A document is accepted with at least `C4_MIN_KEYWORD_MATCHES` distinct phrases, or a URL match plus one phrase. Length bounds and optional allowed domains are checked first. Each decision carries a reason and a filter score.
- `Deduplicator` drops documents with the same normalised text or the same URL. `FilterStatistics` counts scanned, accepted, rejected and duplicate documents and the rejection reasons.
- `load_eval_documents()` reads the evaluation JSONL (`text` required, `url` and `timestamp` optional).

Notes

- The result is a heuristic subset of C4, not a curated support corpus; marketing pages can pass the filter.

Defined in this file

Extracted from the source code (classes, public functions and methods).

Name	Description
`class FilterDecision`	Result of filtering one document: accepted?, reason, score, matched keywords.
`class SupportDocumentFilter`	Decides whether a C4 document looks like customer-support content.
`.evaluate(text, url)`	Check length, domain, text phrases and URL keywords of one document.
`normalized_text_hash(text)`	Hash of lower-cased, whitespace-normalised text (for de-duplication).
`class FilterStatistics`	Scanned / accepted / rejected / duplicate counts and rejection reasons.
`.to_dict()`	Convert to a plain dictionary for JSON reports.
`class Deduplicator`	Remembers seen texts and URLs.
`.is_duplicate(text, url)`	True if the text or URL was seen before (and remember it otherwise).
`class EvalDocument`	One evaluation document (id, text, url, timestamp).
`load_eval_documents(path, max_samples)`	Read the evaluation JSONL; text is required.
