zero_expert.py

`src/moe_pruning/pruning/zero_expert.py · 34 lines · module moe_pruning.pruning.zero_expert`

What it does

`ZeroExpert` is a parameter-free placeholder for removed experts in the `drop` and `reroute` methods. The slot is kept so the router's indices stay valid.

How it works

- `drop`: returns zeros, so tokens routed there keep only their residual.
- `reroute`: created with `must_be_unused=True`; any token that still reaches it raises an error instead of being silently zeroed.

Defined in this file

Extracted from the source code (classes, public functions and methods).

Name	Description
`class ZeroExpert`	Parameter-free placeholder for a removed expert (drop / reroute).
`.forward(hidden_states)`	Return zeros of the expert output shape (error if must_be_unused and reached).
