reproducibility.py

`src/moe_pruning/utils/reproducibility.py · 71 lines · module moe_pruning.utils.reproducibility`

What it does

Seeding, environment capture and resource measurement for experiment records.

How it works

- `set_seed()` seeds Python, NumPy and torch.
- `environment_info()` records Python/torch/transformers versions, device and known non-determinism of the device.
- `memory_info()` records process memory and MPS or per-GPU CUDA memory; `timed()` measures wall-clock time.

Defined in this file

Extracted from the source code (classes, public functions and methods).

Name	Description
`set_seed(seed)`	Seed Python, NumPy and torch.
`environment_info(device)`	Python / torch / transformers versions, device and determinism note.
`memory_info(device)`	Process RSS and MPS or per-GPU CUDA memory.
`timed()`	Context manager that records elapsed wall-clock seconds in `result['seconds']`.
