reproducibility.py — technical

`src/moe_pruning/utils/reproducibility.py · 71 lines · moe_pruning.utils.reproducibility`

Purpose

Seeds, environment and resource records.

Step by step

Classes and functions in source order. Signatures, line ranges, raised exceptions and settings are extracted from the code; numbered steps describe what the code does.

`set_seed`

```
def set_seed(seed: int) -> None
```

lines 31-36

Seed Python, NumPy and torch.

`environment_info`

```
def environment_info(device: torch.device) -> dict
```

lines 39-49

Python / torch / transformers versions, device and determinism note.

`memory_info`

```
def memory_info(device: torch.device) -> dict
```

lines 52-60

Process RSS and MPS or per-GPU CUDA memory.

`timed`

```
def timed() -> Iterator[dict]
```

lines 64-71

Context manager that records elapsed wall-clock seconds in `result['seconds']`.

1. Context manager; on exit stores elapsed `perf_counter` seconds (rounded) in the yielded dict.

Module constants

Name	Value
`DETERMINISM_NOTES`	{'cpu': 'Deterministic for the operations used here (fixed seeds, no dropout in eval mode).', 'mps': 'MPS does...
